

METHOD FOR APPLYING A RESEALABLE POURING ELEMENT TO A CONTAINER AND CORRESPONDING CONTAINER

ABSTRACT

A method for applying a reclosable pouring element comprising a pouring opening and a flange and having a removable cap, to a container having an opening. The method comprising the steps of connecting the pouring element to a lid of the container having an opening by affixing the flange of the pouring element to the lid in a liquid-tight fashion. Sealing a section of a closure film on the pouring element so that the pouring opening of the pouring element still remains open. Connecting the lid to the container body in a liquid-tight fashion. Sterilizing an interior of the container. Filling the container with a product through the pouring opening. Closing the container by sealing the closure film onto the pouring element in such a fashion that the pouring opening of the pouring element is closed in a liquid-tight fashion and applying the cap to the pouring element.
